

300 times more expensive than a wobble board...

## Infinitely Better.

### Why the PROPRIO® 2000?

#### It's Good Looking and Smart

How many patients do you see that don't have some balance problem? The PROPRIO's low step height, ergonomic handles, and bench seat are designed for maximum patient accessibility and use. We teach all of your staff how to use the PROPRIO® from day one.

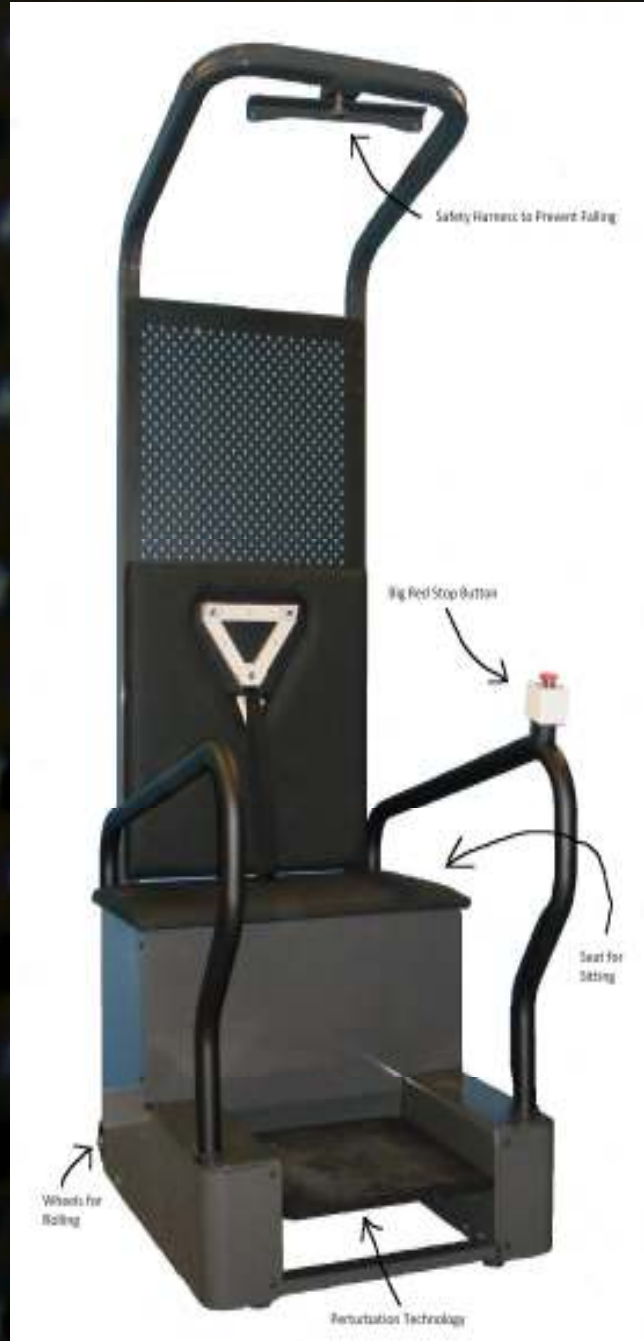

#### Reactive Balance Training

The last time I fell while standing still was... never. To properly improve balance, therapists should assess and train balance in quiet stance, anticipatorily, and reactively. The best way to prevent falls and improve reactive balance is to be destabilized and learn how to properly react.

The PROPRIO® 2000 provides true reactive balance testing and training using perturbation technology.

#### Better Patient Results

Period. Pick-up where conventional training methods stop.

The smallest, most affordable PROPRIO® System

### Why not buy 300 wobble boards?

#### Attract New Customers

The clinic across town has five wobble boards. You need better therapists and a better gym.

#### Objective Measurement

Our ultrasonic measuring device and standardized tests provide accurate and objective postural control information as evidence of patient improvement.

#### Real-time Biofeedback

Visual biofeedback shows the patient how their trunk moves in response to the perturbed platform. By understanding how postural control deviates from midline, you can improve body kinematics leading to better balance.

#### Increase Therapist Efficiency

Reduce the need to go from device to device and give multiple explanations of use and safety. The PROPRIO® replaces several pieces of equipment and gives more training options.

The PROPRIO® 2000 packs the PROPRIO® experience into a compact unit the size of a small refrigerator. Using perturbation technology, the computer controlled platform moves in speeds from 1 degree to 70 degrees per second. This allows the widest range of patients to safely start postural control and fall prevention training prior to being fully weight bearing.

Complete at \$29,500, the PROPRIO® 2000 is the most affordable way to get a PROPRIO® Reactive Balance System.
